

# Turn Your Documentation Into Expertise

AI that knows what your experts know — and learns more every day

## Your Team Is Drowning

| The Pain                                 | The Cost                         |
|------------------------------------------|----------------------------------|
| Senior experts answer the same questions | Hours/week of high-value time    |
| New hires take months to get productive  | Training overhead                |
| Tribal knowledge walks out the door      | Risk when experts leave          |
| Documentation says what, not how         | Gaps between policy and practice |

## What If Your Documentation Could Talk?

Not a chatbot that quotes manuals. **An expert that knows what actually works.**

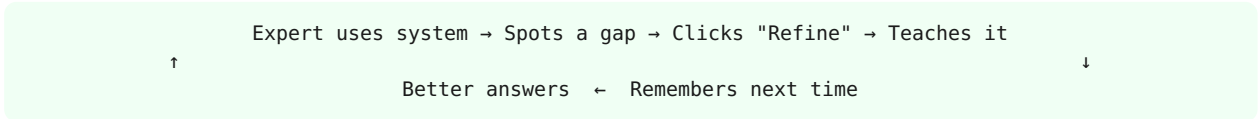

Q: "How do I demonstrate AU.L2-3.3.1?"

A: Here's the control, the evidence you need, the PowerShell command to run, and the gaps assessors usually find.

Sources: 800-171 3.3.1, CMMC AU.L2

## The Learning Loop

Every refinement makes it smarter. **Forever.**

| Timeline | What Happens                                   |
|----------|------------------------------------------------|
| Week 1   | 50 refinements → ~85% accuracy                 |
| Month 1  | 200+ refinements → handles edge cases          |
| Month 6  | Institutional knowledge that survives turnover |

## Three Layers, One Expert

| Layer         | What It Is               | Why It Matters                     |
|---------------|--------------------------|------------------------------------|
| Foundation    | Your docs, structured    | Answers from <i>your</i> knowledge |
| Institutional | What experts actually do | Practical, not theoretical         |
| Refinements   | Learns from corrections  | Gets smarter, never forgets        |

## ROI Calculator

| If your senior expert...     | And they cost... | You're spending... |
|------------------------------|------------------|--------------------|
| Answers questions 8 hrs/week | \$150K/year      | \$30K/year on Q&A  |
| Cut that by 75%              |                  | \$22K saved        |

---

**Praxis pays for itself in Year 1.**

## Get Started

---

| Step           | What                            | Investment    |
|----------------|---------------------------------|---------------|
| <b>Demo</b>    | See it work with your questions | Free / 30 min |
| <b>Pilot</b>   | 4-week proof of concept         | \$10K         |
| <b>Deploy</b>  | Full implementation + training  | \$45K         |
| <b>Managed</b> | Hosting, support, updates       | \$3K/mo       |

---

### Next Step

30 minutes. Bring your hardest compliance question.
